

Tying the String Knot

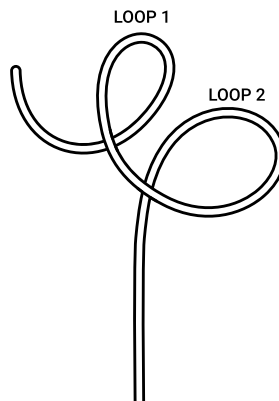

Use your harp's string chart to select the correct string to replace on your harp.

If it is long enough, insert the string **DOWN** through the soundboard before tying the knot.

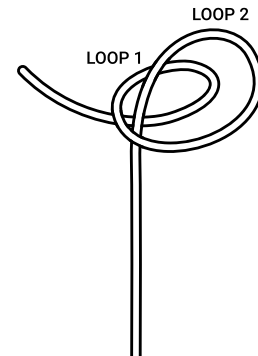

1. Make a loop

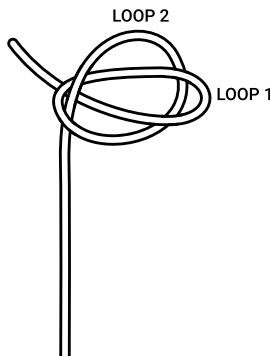

2. Make a second loop

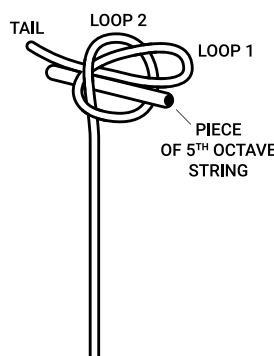

3. Place Loop 2 over the top of Loop 1

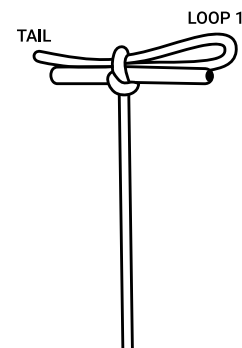

4. Pull the knot partially tight

5. Insert a string anchor into the knot

6. Pull the knot as tight as possible

7. If the string is very thin, make a 3rd loop and put it over the first loop and tighten again
